

Rebuilding of pos.servo

A setting system on the machine that works satisfying is a matter of course. It is also very important that spareparts are available.

Still there are many ARI-machines with the old setting systems, Bore and Bonett, to which it has become difficult to get spares.

That's the reason why AriVislanda has compiled rebuilding kits with Nobel pos 50 and 100 cylinders and SBS or Micropos electronics. These combinations, used by us for many years, have proved to be very dependable.

The rebuilding kits includes cylinders, valves, electronic, brackets etc. that are required to secure a satisfying function of the system. The kits are available for all our machines.

For more information, please contact AriVislanda After Sales.
