

## Rebuilding kit for milling machine

AriVislanda has made a rebuilding kit for the milling machine BF-1 for sawguides, where we have replaced the only cutting tool with a multi cutter head with 12 tools.

This has resulted in a better dimensional accuracy and the surface on the cutted saw guides has become much better than before and furthermore the machining time is notably shorter.

Besides a new cutter head the rebuilding kit includes a stronger holder with a

bracket for the dial test indicator and all necessarily parts for the rebuilding
