

## Brake for fence to cant resaw DS-70 series

### Keep the dimensional accuracy!

With increased feed speeds and shorter log gaps the machines have to re-set much faster.

This involves a lot more stress on the equipment. To keep the dimensional accuracy in the machine and prevent the fence arm from failing, we have made a brake that locks the fence side during sawing.

A complete set of parts with pneumatic brake and electric valve is supplied.

Easy to install on the machine stand. Programming to be required.
