

## Driven centering rollers for DSI-4

**All logs are not free from twigs!  
Increase the safety of operation by  
installing driven centering rollers in  
your existing cant saw infeeder.**

Complete set of parts where we have equipped one side of the centering rollers with hydraulic driven, fluted roller.

- Easy rebuilding for both 2 and 3 rollers
- Can also be completed with a driven upper pressure roller
- Constant log gap gives a better flow through the machines which means higher availability and production
- Safer feeding when winter sawing
