

Cant turner CT-100

- ✓ Compact
- ✓ Easily integrated

CT-100 is a simple and space-efficient cant turner, designed for integration into existing sawlines in combination with existing machinery.

CT-100 tips the cant on its side, while it rests on a roller conveyor. The height and width of the frame are adapted to the conveyor. In some cases, the tipping mechanism itself can be mounted directly onto existing machines.

The unit features a robust arm that moves vertically. Attached to this arm is a specially designed roller that moves laterally to tip the cant over. All movements are powered by hydraulic cylinders, and the machine is equipped with position sensing to determine the vertical position of the roller.

Technical data

Max feed speed	150 m/min
Min/Max log diameter	100/700 mm
Weight	app 400 kg
