

Measuring conveyor

- ✓ Adapted to customer conditions
- ✓ Stable construction
- ✓ Secure feeding

The Measuring conveyor feeds the log through the measuring frame to the log turner. The length of the conveyor is adapted to the logs being processed in the sawline.

The chain is equipped with robust flight attachments to ensure that the position of the log does not shift during measuring and transport.

When the logs are fed on to the conveyor from the side a Log damper is utilized to ensure a smoother reception of the log.

When part of a Merry-go-round the Measuring conveyor is equipped with Infeed plates for sideways inlaying of the cant.

Technical data

Min/Max log diameter	100/700 mm
Log length.....	2-6,3 m
Power requirement flight chain	15 kW
