

Roller conveyor

- ✓ Robust Construction
- ✓ High speed

The Roller conveyor features a robust design capable of transporting heavy workpieces at high speeds. The conveyor length is adjusted according to log length and length of the sawline.

In its standard configuration, the conveyor is equipped with smooth rollers, though this may vary depending on line position and optional features. The rollers are driven by an electric motor and chain drive.

Depending on its position in the line, the Roller conveyor may have different designs and can be equipped with additional auxiliary equipment.
