

Rooftop

- ✓ Robust Construction
- ✓ With or without even-end rollers

The **Rooftop** is a discharge unit, which function is to transfer the sawn products from the sawline to the subsequent conveyor. The unit is available with or without Even-end rollers.

The dimensions of the Rooftop (length and width) are determined by the log length and the specifications of the preceding conveyor system. It has frames of square tubing and cover plates that are either fixed or removeable for easier access at maintenance. Drive of the Rooftop-chains is powered by an electric motor via a drive shaft and the even-end rollers have an electric motor and belt drive.

Power requirement

Rooftop-chains	2,2 kW
Even-end rollers	2,2 kW
